Muns Welding and Mechanical, Inc.

“A” Area Boiler Replacement Project Savannah River Site, Aiken SC

Muns Welding and Mechanical, Inc. Project Managers Jimmy Anderson and Mike Yow were responsible for the receipt, offload and setting of all purchased equipment, including the Biomass Boiler, Oil-Fired Boiler, Precipitator and walking floor. Muns was also responsible for all piping, plumbing and access platform erection. The Plant will replace the Coal Fired Unit that was built in the 1950's. Total project duration was 10 months. The project was completed with no Lost Work Days Incidents and only one OSHA recordable first aid case. We hope you will consider Muns for your next mechanical installation.
